processes you can automate **in a week**

A practical list for small and medium-sized businesses

Sales and quotes

Customer service

Finance and accounting

Logistics and warehouse

Marketing and content

Admin and HR

30

PROCESSES

6

AREAS OF A BUSINESS

2-7 days

PER IMPLEMENTATION

EMAIL

AI

ERP

INVOICE

TEAM

How to use this list

Thirty cards. Each one is a repetitive job that somebody in a typical company still does by hand today, and a way to take it off people's plates in a few days.

01

Pick one process

Don't read this like a catalogue. Skim the list and mark three things your company does by hand every day. Then pick one. One, not five.

02

Work out what it costs

Every process has three numbers: how many minutes it takes, how many times a day it repeats, and how many days a month. Multiply them. The result usually comes as a surprise, which is why there's a calculator next to this.

03

Start with the one that hurts most

Not the easiest one and not the flashiest. The one that makes somebody in the company roll their eyes. Your team will love that automation within a week, and you'll see that this works.

CALCULATOR: WHAT IT COSTS

minutes × times a day × days
= hours a month

12 × **8** × **21**
MINUTES TIMES A DAY DAYS

33.6 h a month (2,016 min)

That's almost a **full working week** for one person. At PLN 60 an hour: about **PLN 2,000 a month** and over **PLN 24,000 a year**. On a single process.

How to read a card

WHAT HURTS

A symptom you know from everyday work. If you don't recognise it, skip ahead.

TOOLS

A typical set. We swap them for whatever you already have in the company.

RESULT

Figures from typical projects in companies of 5 to 50 people. We'll work out your own.

HOW WE AUTOMATE IT

What exactly the automation does and where a human stays in the loop.

DELIVERY TIME

From kick-off to running, with access to your systems ready.

A WEEK

A rule of thumb: a single process, without rebuilding the whole company.

Six areas, thirty processes

01 Sales and quotes p. 3

02 Customer service p. 4

03 Finance and accounting p. 6

04 Logistics and warehouse p. 8

05 Marketing and content p. 9

06 Admin and HR p. 11

SECTION 01

Sales and quotes

Here every lost hour is a quote that never went out or an enquiry left unanswered. We start where the money is.

01 Orders from email straight into the ERP

WHAT HURTS

A customer sends an order by email: a PDF, a spreadsheet, sometimes a photo. Somebody retypes it by hand into Subiekt or Comarch and every so often gets the quantities wrong.

HOW WE AUTOMATE IT

AI reads the attachment, pulls out the items, codes and quantities, and matches them to your product records. The order lands in the ERP as a document awaiting approval. The sales rep just checks it and clicks "OK".

TOOLS

n8n OpenAI/Claude Comarch
Subiekt Microsoft 365

DELIVERY TIME

3–5 days

RESULT

from 26 min to 1 min per order

02 A quote from the price list in five minutes

WHAT HURTS

Every quote is a copy-paste of the previous one. Old prices, another company's name in the header, half a day on a single document.

HOW WE AUTOMATE IT

The sales rep enters the items in a simple form or types them into a chat. The system pulls current prices and the customer's discounts, builds a PDF from a template and sends it. A copy goes to the CRM.

TOOLS

Make Google Workspace
Subiekt Comarch CRM

DELIVERY TIME

2–4 days

RESULT

a quote in 5 min instead of 45

03 Website enquiry straight into the CRM, with a reply

WHAT HURTS

An enquiry from the web form sits in the inbox until morning. Some get lost among other emails, and meanwhile the customer writes to a competitor.

HOW WE AUTOMATE IT

The form creates an opportunity in the CRM. AI assesses the enquiry (industry, urgency, what it's about) and sends a personalised reply within two minutes. The sales rep gets a notification with a short summary.

TOOLS

n8n OpenAI/Claude HubSpot
Pipedrive Teams

DELIVERY TIME

2–3 days

RESULT

a reply in 2 min instead of 6 h

04 Follow-up after a quote goes out

WHAT HURTS

You sent the quote and then silence. Nobody remembers to follow up, so the deal quietly dies.

HOW WE AUTOMATE IT

After 3 and 7 days without a reply the system sends a short reminder in your style. When the customer writes back, the sequence stops and the sales rep gets a task with the full context.

TOOLS

Make CRM Microsoft 365

Google Workspace

DELIVERY TIME

1–2 days

RESULT

20–30% more quotes get a reply

05 Recovering abandoned carts

WHAT HURTS

Customers fill their cart and disappear. The shop does nothing about it, and that's 7 out of 10 carts.

HOW WE AUTOMATE IT

An hour later the customer gets an email with what they left behind. A day later a second one, with a small discount or free delivery. We measure how many carts come back and what that's worth.

TOOLS

WooCommerce Shoper n8n

MailerLite SMSAPI

DELIVERY TIME

2–3 days

RESULT

5–10% of carts come back

SECTION 02

Customer service

The customer wants an answer now, not tomorrow. The automation answers right away, a human steps in only when it really matters.

06 Email checker: AI sorts the inbox

WHAT HURTS

Everything lands on office@: orders, complaints, invoices, spam. Somebody reads every email and forwards it on.

HOW WE AUTOMATE IT

AI reads the message, assigns a category and a priority, and passes it to the right person. For simple questions (status, opening hours, prices) it drafts a reply ready to send with one click.

TOOLS

n8n OpenAI/Claude

Microsoft 365

Google Workspace

DELIVERY TIME

3–5 days

RESULT

1.5 h a day less in the inbox

07 WhatsApp checker: AI replies and sorts messages

WHAT HURTS

Customers message you on WhatsApp at all hours. You reply from your phone, nothing reaches the system, and some messages get lost.

HOW WE AUTOMATE IT

A bot on the WhatsApp Business API answers common questions, collects the details for an order or a complaint, and saves the conversation in the CRM. Harder cases go to a human together with a summary.

TOOLS

WhatsApp Business API n8n
OpenAI/Claude CRM

DELIVERY TIME

4–6 days

RESULT

7 out of 10 messages need no human

08 Order status before the customer asks

WHAT HURTS

"Where's my parcel?" is half of all calls to customer service. Each one takes a few minutes and breaks someone's flow.

HOW WE AUTOMATE IT

Every status change (received, packed, shipped, delivered) sends the customer an email or a text with a tracking link. When the courier is late, the customer finds out first, before they pick up the phone.

TOOLS

BaseLinker WooCommerce
SMSAPI Make

DELIVERY TIME

1–2 days

RESULT

40% fewer "where's my parcel" calls

09 Complaints in one place

WHAT HURTS

Complaints come in by email, by phone and through the form. Nobody knows how many are open or who's handling them.

HOW WE AUTOMATE IT

Every case gets a number and goes onto a single board. AI pulls out the order number and the description of the fault. The system keeps an eye on the 14-day deadline and updates the customer at every stage.

TOOLS

n8n OpenAI/Claude Trello
Jira Microsoft 365

DELIVERY TIME

3–4 days

RESULT

zero overdue complaints

FROM EXPERIENCE

AI in customer service doesn't have to answer on its own from day one. To begin with, it's enough that it prepares a draft and a human clicks "send". Trust in an automation is built week by week, and that's a healthy way to do it.

10 NPS survey after every order

WHAT HURTS

You don't know what customers think until one of them leaves a one-star review on Google.

HOW WE AUTOMATE IT

Three days after delivery the customer gets a single question: 0 to 10. Unhappy ones are passed to you for a call the same day. Happy ones get a request for a Google review with a ready-made link.

TOOLS

Make Tally
Google Workspace SMSAPI

DELIVERY TIME

1–2 days

RESULT

3× more Google reviews

SECTION 03

Finance and accounting

Documents, deadlines, transfers. The most repetitive work in the whole company, and the easiest to put a price on.

11 Purchase invoices: OCR and approval flow

WHAT HURTS

Purchase invoices arrive by email, as photos from a phone, on paper. Somebody retypes them into the system and sends a batch to the accountant.

HOW WE AUTOMATE IT

AI reads the invoice (VAT ID, amounts, VAT, line items), checks the supplier against the VAT whitelist, saves it in the ERP and passes it to accounting with a note on what it's for. You only approve.

TOOLS

n8n OpenAI/Claude Comarch
Subiekt Fakturownia

DELIVERY TIME

3–5 days

RESULT

from 4 min to 20 s per invoice

12 Payment reminders and gentle debt collection

WHAT HURTS

Customers pay late because nobody reminds them. Calling is awkward and takes time, so nobody calls.

HOW WE AUTOMATE IT

The system sends a polite reminder 3 days before the due date, on the due date and 7 days after, each one a little firmer. After 14 days you get a short list of people to call.

TOOLS

Make Fakturownia Comarch
Subiekt Microsoft 365

DELIVERY TIME

2–3 days

RESULT

paid 9 days sooner on average

13 Matching payments with the bank

WHAT HURTS

Every morning somebody compares the bank statement with the list of invoices and marks what's been paid by hand. At 50 transfers a day that's an hour.

HOW WE AUTOMATE IT

The system pulls transfers from the bank (API or an MT940 file), matches them to invoices by number, amount and payer, and marks them as paid in the ERP. Anything that doesn't match goes onto a short exceptions list.

TOOLS

n8n Comarch Subiekt

bank: API / MT940

DELIVERY TIME

3–5 days

RESULT

from 40 min a day to 5 min

14 Sales invoices that issue themselves

WHAT HURTS

After every paid order somebody has to issue an invoice and send it to the customer. At 30 a day that's real hours.

HOW WE AUTOMATE IT

A paid or shipped order generates its own invoice, sends it to the customer and saves it in the ERP. The document is ready for KSeF (Poland's e-invoicing system), and you get a single summary at the end of the day.

TOOLS

Fakturownia BaseLinker

Make KSeF

DELIVERY TIME

1–3 days

RESULT

2 h a day off your plate

15 A weekly report every Monday at 7:00

WHAT HURTS

To know how the business is doing, you ask for the numbers and wait a day. The summary arrives when it's already out of date.

HOW WE AUTOMATE IT

The system gathers sales, costs, receivables and the bank balance into one readable page. AI adds a comment: what changed and why. The report is waiting in your inbox before you've made your coffee.

TOOLS

n8n OpenAI/Claude ERP

Google Sheets Power BI

DELIVERY TIME

2–4 days

RESULT

the numbers every week, without asking

FROM EXPERIENCE

In finance, the automation never posts anything blindly. Every document has a trail: where it came from, what was read from it, who approved it. Your accountant likes that, and you sleep well.

SECTION 04

Logistics and warehouse

Stock levels, parcels, deliveries. Here a mistake costs twice: people's time, and the trust of a customer whose order got cancelled.

16 Stock sync between the shop and the ERP

WHAT HURTS

The shop shows products you don't have, or zero when they're sitting on the shelf. Somebody fixes it by hand and customers get cancellations.

HOW WE AUTOMATE IT

Stock levels and prices flow from the ERP to the shop every few minutes, and orders from the shop flow back into the ERP. It also works with Allegro and several shops at once, with a single warehouse behind them.

TOOLS

BaseLinker

WooCommerce

PrestaShop

Subiekt

Comarch

DELIVERY TIME

3–5 days

RESULT

zero sales "from an empty warehouse"

17 Shipping labels without clicking

WHAT HURTS

Every parcel means logging into the courier's website, retyping the address and printing a label. Dozens of times a day, every day.

HOW WE AUTOMATE IT

An order that's ready to ship creates its own shipment with the courier chosen by weight and price, prints the label and writes the tracking number into the order. The customer gets it right away.

TOOLS

BaseLinker

InPost

DPD

DHL

Make

DELIVERY TIME

1–3 days

RESULT

from 3 min to 10 s per parcel

18 Low-stock alerts and a purchase order for the supplier

WHAT HURTS

A product runs out and you only find out when a customer orders it. Then a week of waiting for delivery and apologising.

HOW WE AUTOMATE IT

The system works out a minimum stock level from the last few weeks of turnover. When stock drops below it, it sends an alert and a ready-made purchase order for the supplier, to approve with one click.

TOOLS

n8n

ERP

Google Sheets

Microsoft 365

DELIVERY TIME

2–3 days

RESULT

60% fewer stock-outs

19 Goods receipt from the delivery note

WHAT HURTS

When a delivery arrives, somebody compares the supplier's delivery note with the purchase order and keys in the goods receipt line by line. The driver waits, the phone rings.

HOW WE AUTOMATE IT

AI reads the delivery note or the invoice, compares it with the purchase order and creates the goods receipt in the ERP. Discrepancies (3 units missing, a different price) are highlighted and wait for a human decision.

TOOLS

OpenAI/Claude n8n Comarch
Subiekt

DELIVERY TIME

3–4 days

RESULT

from 20 min to 3 min per delivery

20 Returns without the paperwork

WHAT HURTS

A customer wants to return something. Emails, a form, booking the goods back into stock by hand, a refund. A week of hassle for both sides.

HOW WE AUTOMATE IT

The customer reports the return through a form and gets a return label. Once the parcel is scanned in the warehouse, the system books the goods back into stock and triggers the refund. The customer gets a confirmation.

TOOLS

BaseLinker WooCommerce
InPost Make PayU

DELIVERY TIME

3–4 days

RESULT

refund in 24 h instead of a week

SECTION 05

Marketing and content

Content gets made when somebody has a spare moment. Which is rarely. The automation always has a moment, you just approve.

21 Product descriptions written with AI

WHAT HURTS

Four hundred products with no description, or with one copied from the manufacturer. Google doesn't like that, and neither do customers.

HOW WE AUTOMATE IT

AI writes descriptions from the technical data and photos, in your tone of voice, with headings and keywords. You approve them in a spreadsheet, and the system pushes the finished descriptions into the shop.

TOOLS

OpenAI/Claude Google Sheets
WooCommerce Shopier n8n

DELIVERY TIME

2–3 days

RESULT

400 descriptions in 2 days instead of 2 months

22 Posts published on a schedule

WHAT HURTS

Posts get written when somebody has a moment. Which is rarely, with no plan, and usually on a Friday afternoon.

HOW WE AUTOMATE IT

You keep the content in a single spreadsheet or in Notion. The system publishes it at set times on Facebook, LinkedIn and Instagram. AI suggests three versions of the text to choose from.

TOOLS

Make Meta API LinkedIn API
Notion OpenAI/Claude

DELIVERY TIME

1–2 days

RESULT

3 posts a week, nobody chasing

23 Mailings and measuring campaign results

WHAT HURTS

The newsletter goes out to everyone the same way. Then nobody checks whether it did anything, because the data sits in three different systems.

HOW WE AUTOMATE IT

The list is segmented by what each customer bought and when. Every campaign gets an automatic report: opens, clicks, orders and revenue in one table, the day after sending.

TOOLS

MailerLite GetResponse
WooCommerce Looker Studio
Make

DELIVERY TIME

2–3 days

RESULT

you know which campaign made money

24 Monitoring reviews on Google and Allegro

WHAT HURTS

A bad review sits there for a week before anyone notices. For that whole week every new customer reads it.

HOW WE AUTOMATE IT

A new review shows up in Teams or in your inbox within fifteen minutes. AI suggests a draft reply in your tone. Positive ones get a thank-you, negative ones go to a human.

TOOLS

n8n Google Business Profile
Allegro API OpenAI/Claude

DELIVERY TIME

1–2 days

RESULT

a reply in 1 h instead of 7 days

FROM EXPERIENCE

AI-generated content always goes through your approval. The automation saves time on writing and publishing, but it doesn't take away responsibility for what the company says to the outside world.

25 One recording: a post, an email and a blog article

WHAT HURTS

You have the knowledge but no time to write. The blog has been stuck since last year, LinkedIn since the summer.

HOW WE AUTOMATE IT

You record a five-minute voice note. AI transcribes it and turns it into a LinkedIn post, a newsletter and a draft blog article, in your style. Everything waits for your approval.

TOOLS

OpenAI/Claude n8n
Google Docs Notion

DELIVERY TIME

1–2 days

RESULT

**5 min of recording =
a week of content**

SECTION 06

Admin and HR

Requests, contracts, deadlines, access rights. Nobody likes doing this, so let the system do it and let people approve.

26 Company AI agent: collects tasks, assigns them, reports

WHAT HURTS

Tasks fly around in emails, WhatsApp, Teams and hallway conversations. Nobody has the full picture, things fall through the cracks.

HOW WE AUTOMATE IT

The agent reads the channels, picks out tasks and deadlines, puts them on a single board and assigns them to the right people. In the morning it sends you a short report: what's done, what's stuck, what's urgent today.

TOOLS

OpenAI/Claude n8n
Microsoft 365
WhatsApp Business API Trello

DELIVERY TIME

5–7 days

RESULT

**one list instead of five
channels**

27 Contract flow: from template to signature

WHAT HURTS

The contract goes round by email in five versions. Nobody knows which one is the latest or whether anyone has actually signed it.

HOW WE AUTOMATE IT

Data from a form fills in the template. The contract goes for approval, then for an electronic signature. The signed file lands in the client's folder, and the system reminds you when the term is about to end.

TOOLS

Google Docs Autenti Make
SharePoint Google Drive

DELIVERY TIME

2–4 days

RESULT

**signed in 1 day instead
of 2 weeks**

28 Onboarding a new employee

WHAT HURTS

On day one the new person has no email, no access and no laptop. The first week is spent waiting and asking who to ask.

HOW WE AUTOMATE IT

A single request creates the account, grants access and sends a task list to the manager and to IT. The new employee gets a welcome pack and a plan for the first week before they walk into the office.

TOOLS

Microsoft 365
Google Workspace n8n
Trello Teams

DELIVERY TIME

3–4 days

RESULT

a ready workstation on day one

29 Leave and absences without paper forms

WHAT HURTS

A form on paper, a signature, an entry in a spreadsheet, an email to HR. Nobody knows who's in tomorrow.

HOW WE AUTOMATE IT

The employee submits a request from their phone, the manager approves with one click. The system checks the remaining allowance, adds the absence to the team calendar and notifies HR.

TOOLS

Microsoft 365
Google Workspace Make
Comarch Optima enova365

DELIVERY TIME

2–3 days

RESULT

zero paper forms, an up-to-date team calendar

30 Company deadlines under control

WHAT HURTS

Medical check-ups, vehicle inspections, insurance policies, domains, supplier contracts. Every deadline lives in a different head and a different file.

HOW WE AUTOMATE IT

One register of deadlines. The system reminds you 30, 14 and 3 days ahead, assigns a person and keeps nagging until someone marks it "done". Once a month it sends you a list of what's coming up.

TOOLS

Google Sheets Airtable n8n
Microsoft 365

DELIVERY TIME

1–2 days

RESULT

zero missed deadlines

FROM EXPERIENCE

Each of these 30 automations works on its own. But the biggest gains come from chaining three or four into one flow: order → invoice → shipping → review. Then a human only steps in where a decision is needed.

Where to start

You don't have to pick all thirty. One process and one conversation is enough. This is what it looks like from the first email to a running automation.

RULE NUMBER ONE

We count the savings before you pay.

Before we build anything, we work out together how many hours and how much money the automation will save: minutes × times a day × days, just like on page 2. That number goes into the quote next to the price.

If the maths doesn't add up, I say so plainly and we don't take it on. An automation that doesn't pay for itself within a few months is a bad automation.

What to prepare for the first conversation

01

One process that hurts

From this list or outside it. It's enough if you can describe it in three sentences.

02

Who does it and how long it takes

Even roughly. "Anna, about 2 hours a day" is a perfectly good answer.

03

Which systems are involved

ERP, shop, CRM, email, spreadsheets. Names are enough, we'll sort out access later.

Let's talk about your first process

ONE MESSAGE IS ENOUGH

Tell me what annoys you most in your day-to-day work. I'll reply with what can be automated.
